Alloys (see **Crystalline state**)
Amplifiers (see **Methods and instruments**)
Arcs (see **Discharge of electricity in gases**)

Batteries
Gassing of lead plate storage cells, W. B. Pietenpol, K. S. Keller—43
Biophysics
Elasticity of protoplasm, H. H. Pfeiffer—302
High frequency apparatus for heat stimulus, A. Hemingway, G. H. Witts—299
Metabolizing systems, concentration fields and mechanical forces, G. Young—380
Metabolizing systems, division of, J. M. Reiner—368
Physics of metabolizing systems, N. Rashevsky—260
Response of skin to radiation, J. D. Hardy, T. W. Oppel—466
Book reviews
First report on viscosity and plasticity, J. M. Burgers, et al—77

Crystalline state
Spectral emissivities, resistivity, and thermal expansion of W-Mo alloys, P. N. Bossart—50

Dielectric constants
Of air at radio frequencies, L. G. Hector, H. L. Schultz—133
Dielectrics and dielectric properties
Relaxation times, W. A. Yager—434
Discharge of electricity in gases
Arc characteristics at low pressures, J. D. Cobine—137
Photographs of lightning, E. J. Workman, J. W. Beams, L. B. Snoddy—375
Sputtering in arc discharges, L. R. Koller—225
Temperature of cathode, L. R. Koller—295
Dynamics
Quasi-holonomic dynamical systems, G. Kron—143

Elasticity
Anisotropy of rubber compounds in flexometer, R. S. Havenhill—179
Bending of plywood, H. W. March—32
Determination of jell strength, I. J. Saxl—62
Drift in rubber under constant load, M. L. Braun—421
Elasto-viscous bodies, behavior of, A. Gemant—311
Force in interior of a solid, R. D. Mindlin—195
Motion of coil spring; variable tension and density, D. A. Wells—395
Piezoelectric resonator, W. G. Cady—237
Pigment particle size and properties of rubber, C. E. Barnett—189
Plastic properties of shellac, W. H. Gardner—306
Plastometer for unvulcanized rubber, J. H. Dillon—73
Properties of asphaltic bitumens, R. N. J. Saal, J. W. A. Labout—408
Of protoplasm, H. H. Pfeiffer—302
Rheology of raw rubber, M. Mooney—413
Rigidity modulus and changes in applied stress, G. M. Francis—160
Stress analysis by x-rays, C. S. Barrett, M. Gensamer—1
Stress in a strip due to variation of temperature, J. N. Goodier—156
Electrical circuits
Amplification of direct currents, P. A. Macdonald—265
High frequency apparatus for heat stimulus, A. Hemingway, G. H. Witts—299
Tuned resistance-capacity coupled amplifiers, E. A. Johnson—130
Electrical conductivity and resistance
Of glass, H. R. Kiehl—20
Of W-Mo alloys, P. N. Bossart—50
Electrolytic cells
Polarization capacity and electrode condition, I. Wolff—203
Polarization impedance, C. C. Murdock, E. E. Zimmerman—211
Electromagnetic theory
Directional characteristics of antenna, W. W. Hansen—460
Radiation from antenna, W. W. Hansen, J. G. Beckerley—220
Electron optics
Aberrations and focusing properties of image tubes, G. A. Morton, E. G. Ramberg—451
Emissivities
Of W-Mo alloys, P. N. Bossart—50

Fluidity (see **Viscosity**)

Gases (see **Kinetic theory**)
Geophysics
Motion under load on earth's surface, N. A. Haskell—56

Hydrodynamics
Flow of fluids through porous media, M. Muskat, M. W. Meres—346
Flow of gas-liquid mixtures through sands, R. D. Wyckoff, H. G. Botset—325
Heat effects in capillary flow, M. D. Hersey—403
Piston ring lubrication, theory, R. A. Castleman, Jr.—364
Seepage flux under dams, M. Muskat—116

Instruments (see **Methods and instruments**)

Kinetic theory of gases
Motion of powder gas, R. H. Kent—319

Liquids (see **Hydrodynamics**)
Double mobility of non-Newtonian fluids, A. de Waele, G. Dinnis—426

Liquids (see **Hydrodynamics**) (continued)
Seepage flux under dams, M. Muskat—116
Viscous fluid under a surface load, N. A. Haskell—56

Magnetic properties
Alternating fields and particles, C. W. Davis—236(L); H. S. Hatfield—55(L)
Mechanics (see **Dynamics**)
Meteorology
Photographs of lightning, E. J. Workman, J. W. Beams, L. B. Snoddy—375
Potential gradient anomalies, F. L. Cooper—387
Methods and instruments
Air-conditioning, applications of physics, E. M. Pugh—85
Amplification of direct currents, P. A. Macdonald—265
Analysis of vibrations of transparent media, J. W. Cookson, H. Osterberg—166(L)
Cathode sputtering in arc discharges, L. R. Koller—225
Copper-oxide rectifier, C. Starr—15
Determination of jell strength, I. J. Saxl—62
Electronic tubes and new uses, D. Ulrey—97
Extrusion plastometer, J. H. Dillon—73
High frequency apparatus for heat stimulus, A. Hemingway, G. H. Witts—299
Oil industry, applications of physics, P. D. Foote—91
Phenomena at cathode, method for studying, L. R. Koller—295
Rheology of raw rubber, M. Mooney—413
Stress analysis by x-rays, C. S. Barrett, M. Gensamer—1
Synthesis of gear tooth curves, J. S. Beggs—163
Tuned resistance-capacity coupled amplifiers, E. A. Johnson—130
X-rays in industry, V. Hicks—79

Oil industry
Acid treatment of wells, M. Muskat, R. D. Wyckoff—106
Applications of physics, P. D. Foote—91
Optical theory
Birefringence of vibrating media, J. W. Cookson, H. Osterberg—166(L)

Permeability
Of compacted powders, R. N. Traxler, L. A. H. Baum—9
Piezoelectric effect
Resonator and effect of electrode spacing, W. G. Cady—237
Plasticity (see **Elasticity**)

Radio
Directional characteristics of antenna, W. W. Hansen—460
Radiation from antenna, W. W. Hansen, J. G. Beckerley—220
Piezoelectric resonator, W. G. Cady—237
Rectifiers
Copper-oxide; characteristics, C. Starr—15
Resistance, electrical (see **Electrical conductivity and resistance**)

Spectra, absorption
Infrared spectroscopy and rubber chemistry, D. Williams—399
Spectroscopy, technique
Infrared spectroscopy and rubber chemistry, D. Williams—399
Surface tension
Of molten glass, W. B. Pietenpol—26
Penetration of creosote into paper strips, C. J. Frosch—167

Thermal conductivity
Air-conditioning problems, E. M. Pugh—85
Heat effects in capillary flow, M. D. Hersey—403
Heat transfer in calorimetry, J. M. Sturtevant—232
Of tungsten, W. C. Michels, M. Cox—153
Thermal expansion
Of magnesium oxide, M. A. Durand—297
Stress in a strip due to variation of temperature, J. N. Goodier—156
Of W-Mo alloys, P. N. Bossart—50

Vacuum tubes
New uses, D. Ulrey—97
Viscosity
Double mobility of non-Newtonian fluids, A. de Weale, G. Dinnis—426
Drift in rubber under constant load, M. L. Braun—421
Effect of an electric field, E. D. Alcock—126
Elasto-viscous bodies, behavior of, A. Gemant—311
Penetration of asphaltic bitumens and viscosity, R. N. J. Saal, J. W. A. Labout—408
Plastic properties of shellac, W. H. Gardner—306
Rheology of raw rubber, M. Mooney—413
Temperature viscosity relations for asphalts, R. N. Traxler, H. E. Schweyer—67

X-rays, diffraction, scattering, reflection, refraction and polarization
Stress analysis by x-rays, C. S. Barrett, M. Gensamer—1
X-rays in industry, V. Hicks—79
